The Environmental Storage Area commonly referred to as MT-5 has secondary containment containers for segregated compliant storage of hazardous materials and also includes an outdoor storage area for vehicles. A 20x50 500-pallet warehouse will be completed by late November 1999. The new facility is projected to be fully operational by February 2000. Workload is projected to increase for usable and scrap generation by 40-65 percent.

### Constraints:

The DRMO receives large quantities of Ammunition Explosive Dangerous Articles due to close proximity to the Live Fire Training Area. Inert certifications and authorizations need constant scrutiny, oversight and verification of Hazardous. Additional large quantities of heavy/light steels are received and must be thoroughly inspected before download due to contaminants, i.e. demil required, AEDA and hazardous.
